

Results of the Antequera 'ophtalmic' tests (on 14 individuals)

Accuracy of code reading according to colour: this table shows first the percentage of codes that were read correctly (for each colour) and then the sample size (how many rings of each colours were examined by the participants)

colour	% correct	N
Yellow	91.06	123
White	89.26	121
Blue	75.19	129
Green	75.40	126
Black	69.77	129

Identification of colours: the diagram below should be self explicative. Of course there are many other aspects that could be analysed, such as the effect of distance, the legibility of each of the 15 letters, etc. We may do this as soon as we have a bigger sample size: but as we will most probably test mainly Italian candidates, expect a Blue-biased result! As you know, we are impartial...
